COS 226 course overview

What is COS 226?

- Intermediate-level survey course.
- Programming and problem solving, with applications.
- **Algorithm:** step-by-step procedure for solving a problem.
- **Data structure:** method for organizing data in a computer.

topic	algorithms and data structures 
data types	stack, queue, union-find
sorting	insertion sort, quicksort, mergesort, priority queue
searching	BST, red-black tree, hash table, k-d tree
graphs	BFS, DFS, Prim, Kruskal, Dijkstra
advanced	randomness, multiplicative weights, intractability

← *new this year*

Why study algorithms and data structures?

Their impact is broad and far-reaching.

Why study algorithms and data structures?

Their impact is broad and far-reaching.

Algorithm: any process which is a sequence of simple local steps on basic units, e.g.,

Bits in computers

Pixels on screen

Atoms in matter

Cells in living tissue

Neurons in brain

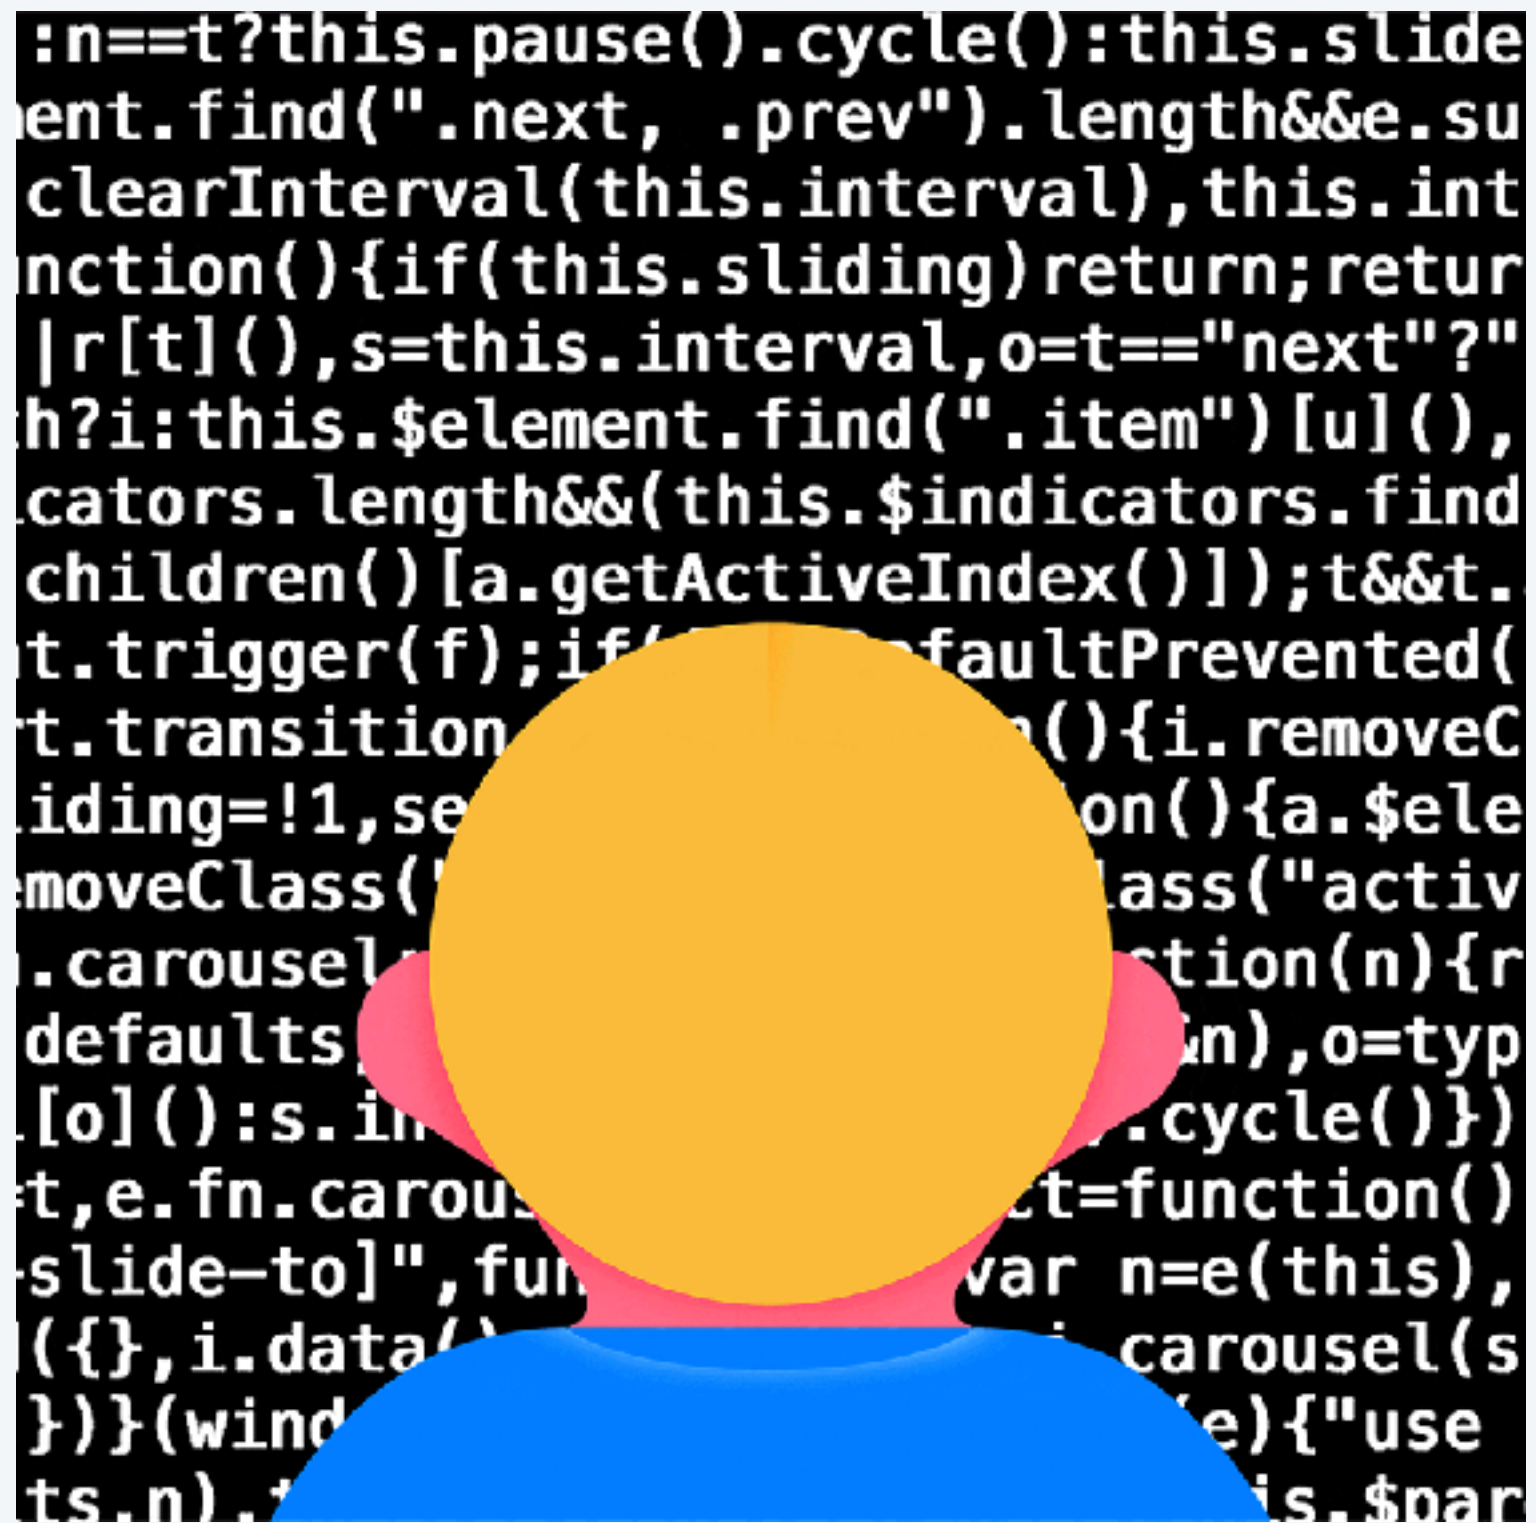

Stars in galaxy

Individuals in populations (social network, stock market, evolution, ...)

⋮

Why study algorithms and data structures?

To become a proficient programmer.

Why study algorithms and data structures?

For fun and profit.

Why study algorithms and data structures?

For intellectual stimulation.

Lectures

Live lectures. Introduce new material.

What	When	Where	Who
L01	TTh 11-12:20pm	Friend 101	Gillat, Pedro, Marcel

Prof. Pedro Paredes

Prof. Marcel Dall'Agnol

Questions. Raise your hand and ask a question. ← *carpe diem!*

Electronic devices. Permitted *only* to support lecture. ← *viewing slides, taking notes, iClickers, ...*

iClicker (required). To earn participation credit:

- Create iClicker Cloud account using Princeton email. ← *free for Princeton students*
- Answer multiple choice questions during lecture.

<https://www.iclicker.com>

What's one thing you wish you had more of?

- A.** Fortune (\$\$)
- B.** Fame
- C.** Free time
- D.** Friends

Precepts

Active learning. Problem-solving, discussion, assignment prep, ...

Prof. Pedro Paredes

Prof. Marcel Dall'Agnol

Dillon Lue

Juhyun (Simon) Park

Jiatong Yu

Zhiyue Zhang

Zhiyue Zhang

Ann Zhou

Abacus precept P09. F 11-12:20pm.

- Intended for students seeking a more advanced treatment of material.
- Covers topics beyond scope of the course.
- Transfer in/out in TigerHub.

Prof. Mark Braverman
(Abacus Medal '22)

INTRO TO COS 226

- ▶ *motivation*
- ▶ *course structure*
- ▶ ***assessments***
- ▶ *resources*
- ▶ *union-find*

Programming assignments

Implement an efficient **algorithm** or **data structure**:

Solve an interesting **application** using a “textbook” algorithm:

Pair programming encouraged on designated assignments.

Programming environment

Recommended IDE. Custom IntelliJ 2024.2 environment.  *upgrade to Fall 2024 version*

- Embedded Bash terminal.
- Autoformat, autoimport, autocomplete, ...
- Continuous code inspection; integrated Checkstyle and SpotBugs.
- ...

Quizzes

PrairieLearn platform.

- 2–3 short questions per lecture.
- Solve using pencil and paper.
- Unlimited attempts (different versions of the question), delay between attempts.
- your score = max score in all attempts.

Written exams.

- Questions drawn from lectures, precepts, and quizzes.
- Emphasizes **non-programming** material.

COS 226 MIDTERM, SPRING 2023

3

3. Data structures. (6 points)

- (a) Consider the following *parent-link* representation of a *weighted quick union* (link-by-size) data structure.

parent[]	4	5	4	5	?	5	2	5	8	5
	0	1	2	3	4	5	6	7	8	9

Which of the following values could be `parent[4]`?

Fill in all checkboxes that apply.

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
0	1	2	3	4	5	6	7	8	9

Grading **A+**

Programming assignments. 45%

- 7 assignments, due at 11:59pm on Mondays via TigerFile.
- Policies (see web): collaboration in all but first two, 4 late days, run unit tests ≤ 10 times, email from dean for further extensions.

Quizzes. 10%

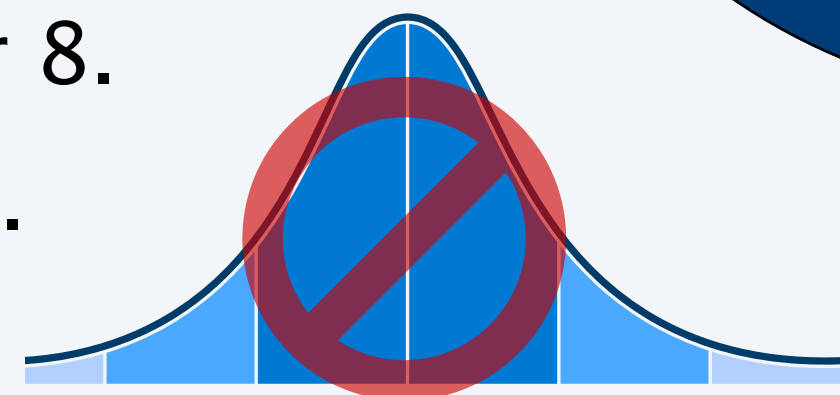

- Due at 11:59pm on Saturdays via PrairieLearn.
- Policies (see web): no collaboration, no late days, delay between attempts, lowest 6 questions dropped.

Exams. 15% + 25%

- 80-minute in-class midterm on Tuesday, October 8.
- 3-hour in-person final, as scheduled by Registrar.

Active participation. 5%

- iClicker participation in lecture, answer at least one poll, 5 absences excused.
- Collaborative participation in precept, 2 absences excused.

grade	score
A	93.0%
A-	90.0%
B+	87.0%
B	83.0%
B-	80.0%
C+	77.0%
C	73.0%
C-	70.0%
D	60.0%

please do not request an extension/waiver unless you will be exceeding the limit

Resources

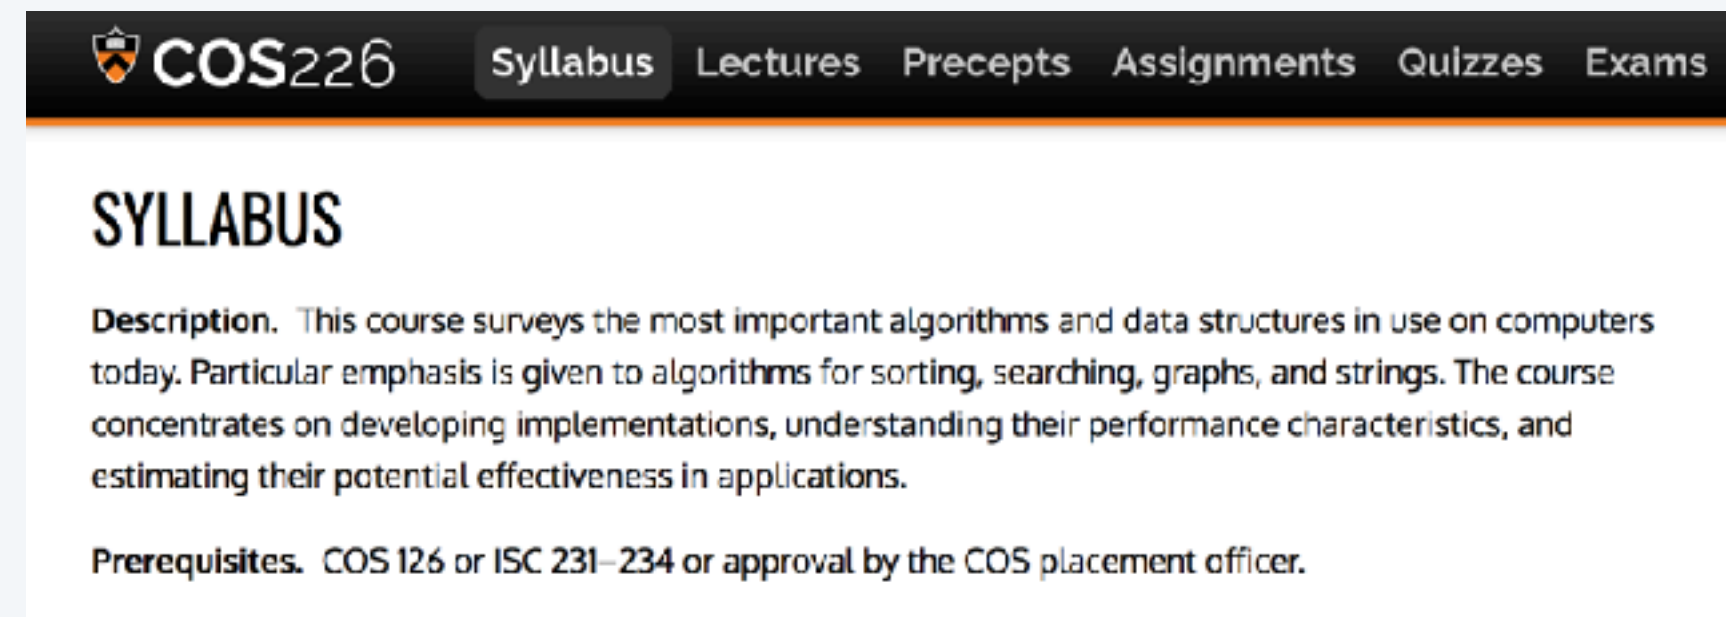

Readings (required). *Algorithms 4th edition* by R. Sedgwick and K. Wayne, Addison–Wesley Professional, 2011, ISBN 0–321–57351–X.

Course website.

- Course info and policies.
- Lecture slides.
- Precept lessons.
- Programming assignments.
- Link to quizzes.
- Exam archive.

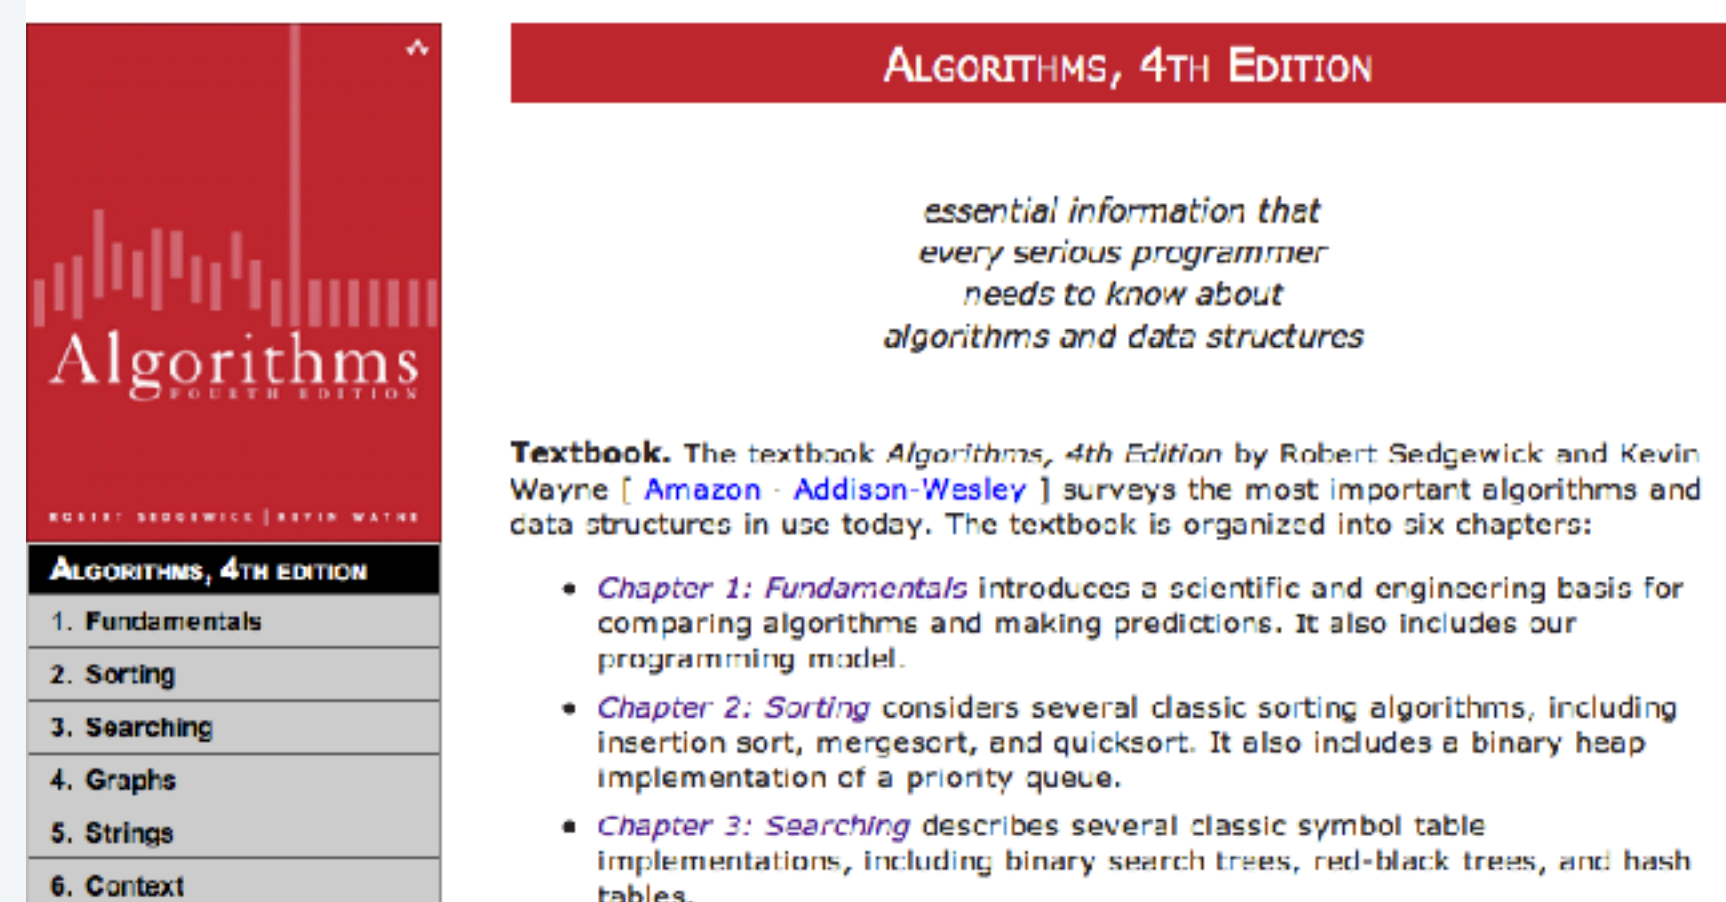

Booksite.

- Brief summary of content.
- Download code from book.
- APIs and Javadoc.

The screenshot shows the COS226 course website. At the top, there is a navigation bar with links for Syllabus, Lectures, Precepts, Assignments, Quizzes, and Exams. The main heading is "SYLLABUS". Below it, a "Description" paragraph states: "This course surveys the most important algorithms and data structures in use on computers today. Particular emphasis is given to algorithms for sorting, searching, graphs, and strings. The course concentrates on developing implementations, understanding their performance characteristics, and estimating their potential effectiveness in applications." Below the description, "Prerequisites" are listed as "COS 126 or ISC 231–234 or approval by the COS placement officer."

<https://www.princeton.edu/~cos226>

The screenshot shows the book's website. On the left is a small image of the book cover. The main heading is "ALGORITHMS, 4TH EDITION". Below it, a quote reads: "essential information that every serious programmer needs to know about algorithms and data structures". The "Textbook" section describes the book and lists six chapters. The first three chapters are detailed in a list:

- **Chapter 1: Fundamentals** introduces a scientific and engineering basis for comparing algorithms and making predictions. It also includes our programming model.
- **Chapter 2: Sorting** considers several classic sorting algorithms, including insertion sort, mergesort, and quicksort. It also includes a binary heap implementation of a priority queue.
- **Chapter 3: Searching** describes several classic symbol table implementations, including binary search trees, red-black trees, and hash tables.
